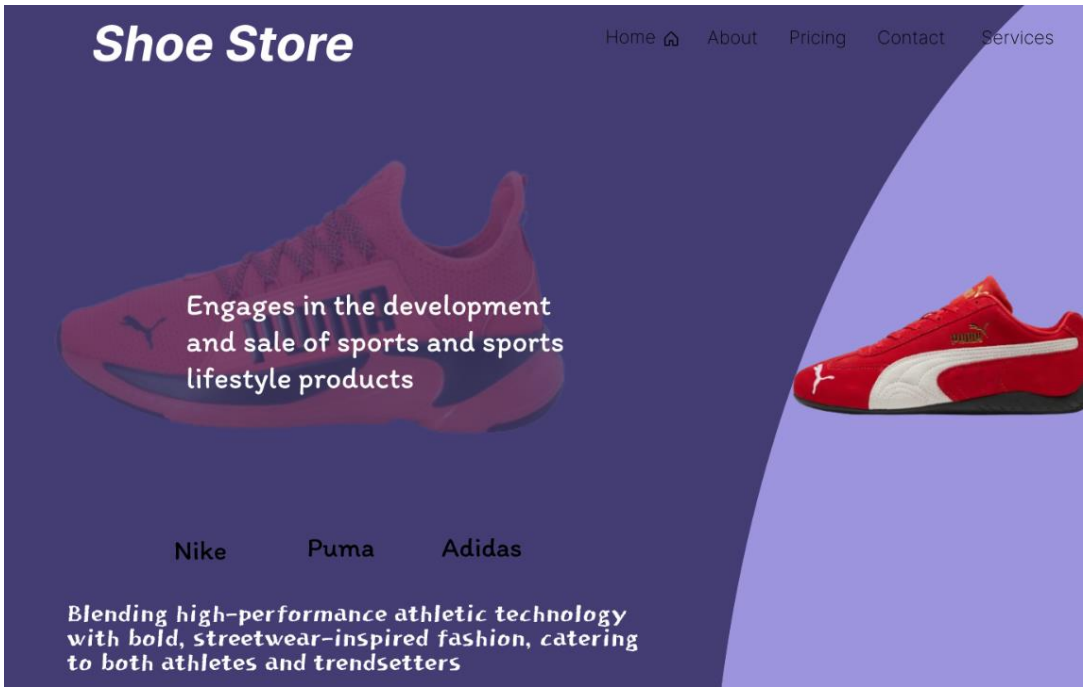
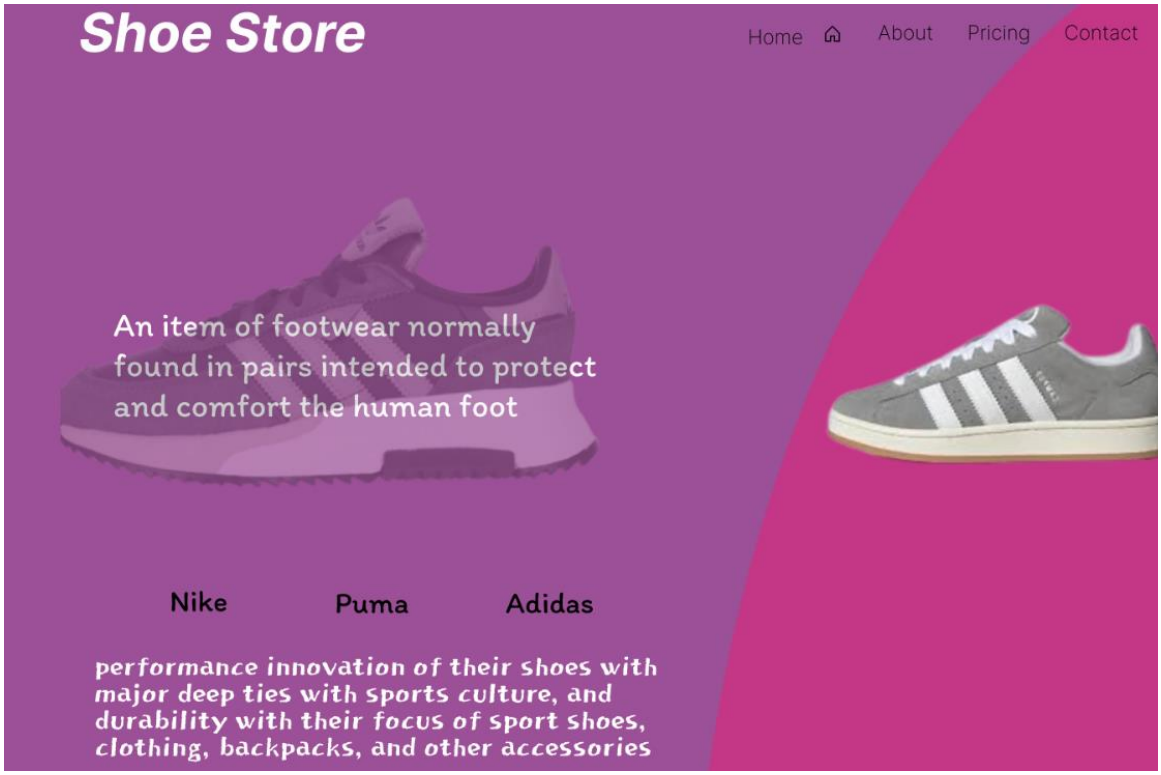
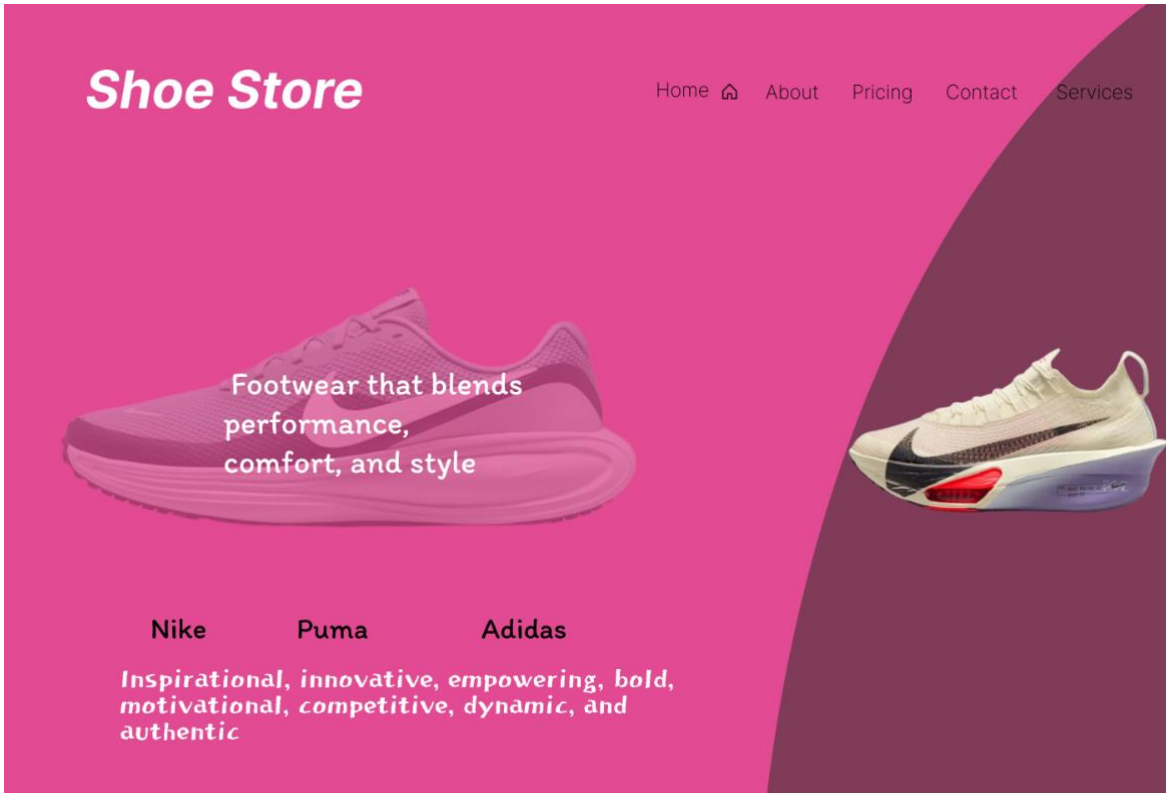
USER INTERFACE AND DESIGN COMPARISON OF UI DESIGN BETWEEN TWO FIGMA CREATION

BAD WEBSITE:

GOOD WEBSITE:







The two websites have distinct designs and approaches. Here's a comparison:

BAD WEBSITE (Shoe Store – Promotional Poster)

1. Design Style:

- Simple flat poster layout with a plain lime-green background.
- Relies solely on color contrast without structured UI components.
- No visual hierarchy — all elements share the same visual weight.

2. Content:

- Displays three shoe brands (Nike, Puma, Adidas) with product images and names.
- Includes a promotional message: "Buy 3 Get 1 Free!!" and "At $199/- only!!"
- Content is brief but lacks descriptive or brand-specific information.

3. Navigation:

- No navigation bar or menu — functions purely as a static poster.
- No interactive elements or call-to-action buttons beyond the offer text.

4. Purpose:

- Designed as a basic offline/online promotional advertisement.
- Lacks the structure and usability expected of a website interface.

GOOD WEBSITE (Shoe Store – Multi-Color UI Design)

1. Design Style:

- Modern split-screen layout with a hero shoe image on the left and a bold product image on the right.
- Multiple themed color palettes (pink, purple, violet) are explored to suit different brand identities.
- Curved background shape on the right panel adds depth and visual interest.

2. Content:

- Each screen includes a tagline describing the brand's identity and values.
- Nike: "Footwear that blends performance, comfort, and style"
- Puma: "Engages in the development and sale of sports and sports lifestyle products"
- Adidas: "An item of footwear normally found in pairs intended to protect and comfort the human foot"

3. Navigation:

- A clean top navigation bar includes Home, About, Pricing, Contact, and Services links.
- Clear structure aids user flow and improves overall usability.

4. Purpose:

- Designed to provide an engaging e-commerce web experience.
- Focuses on brand storytelling, product showcasing, and user navigation.

Key Differences:

- Focus: The bad website is a simple promotional poster; the good website is a fully structured UI.

- Design Aesthetics: The bad design uses a flat, single-color background; the good design uses split-screen layouts with depth and curves.
- Navigation: The bad website has no navigation; the good website features a complete navigation bar.
- Content Depth: The good website includes brand descriptions and taglines; the bad website only shows product names and a price offer.
- Target Audience: The bad design targets impulse buyers through a discount offer; the good design builds brand connection and encourages exploration.
